

## Tactical G-8 Kit

Our Tactical G-8 Kit is a field deployable system that provides all of the operational features and capabilities of our standard G-8 System. This transportable kit includes the components needed for personnel to rapidly deploy the system for tactical or other short-term operations. The kit is housed in a ruggedized SKB case with precision cut foam to protect the system's components during transportation and shipping. As a turn-key solution, the Tactical G-8 Kit is ideal for deployment at large outdoor events, natural disaster sites, flight restricted areas, or locations of public safety operations.

As a portable solution, the system can be easily repositioned to support temporary safety and security operations, as well as criminal or administrative investigations. If extended coverage across a region is needed, multiple Kits can be deployed, and be networked together for concurrent monitoring on a single user interface. When your mission demands drone situational awareness, the Tactical G-8 Kit is the solution.

The Tactical G-8 Kit includes the radio unit, high-gain antenna array, cabling, cellular data modem, tripod mounting stand & hardware, extension cord, tie-downs, tool kit, and all other installation accessories.
